

the *Journal of the American Medical Association* (JAMA) in 1968, and the *Journal of the American Psychiatric Association* (JAP) in 1970.

These journals were the first to publish research on the effects of the Vietnam War on returning soldiers. The research was conducted by a team of researchers led by Dr. Charles M. Frueh.

The research found that returning soldiers from the Vietnam War had a significantly higher rate of mental health problems than those who had not served in the war.

The research also found that the effects of the war on returning soldiers were not limited to mental health problems, but also included physical health problems and social problems.

The research was a landmark study that helped to bring attention to the effects of the Vietnam War on returning soldiers. It also helped to establish the field of post-traumatic stress disorder (PTSD).

The research was published in the *Journal of the American Medical Association* (JAMA) in 1968, and the *Journal of the American Psychiatric Association* (JAP) in 1970.
